

RWANDA

Food system resilience... food systems innovation

David J Spielman

Rwanda Strategy Support Program

International Food Policy Research Institute

April 12, 2021

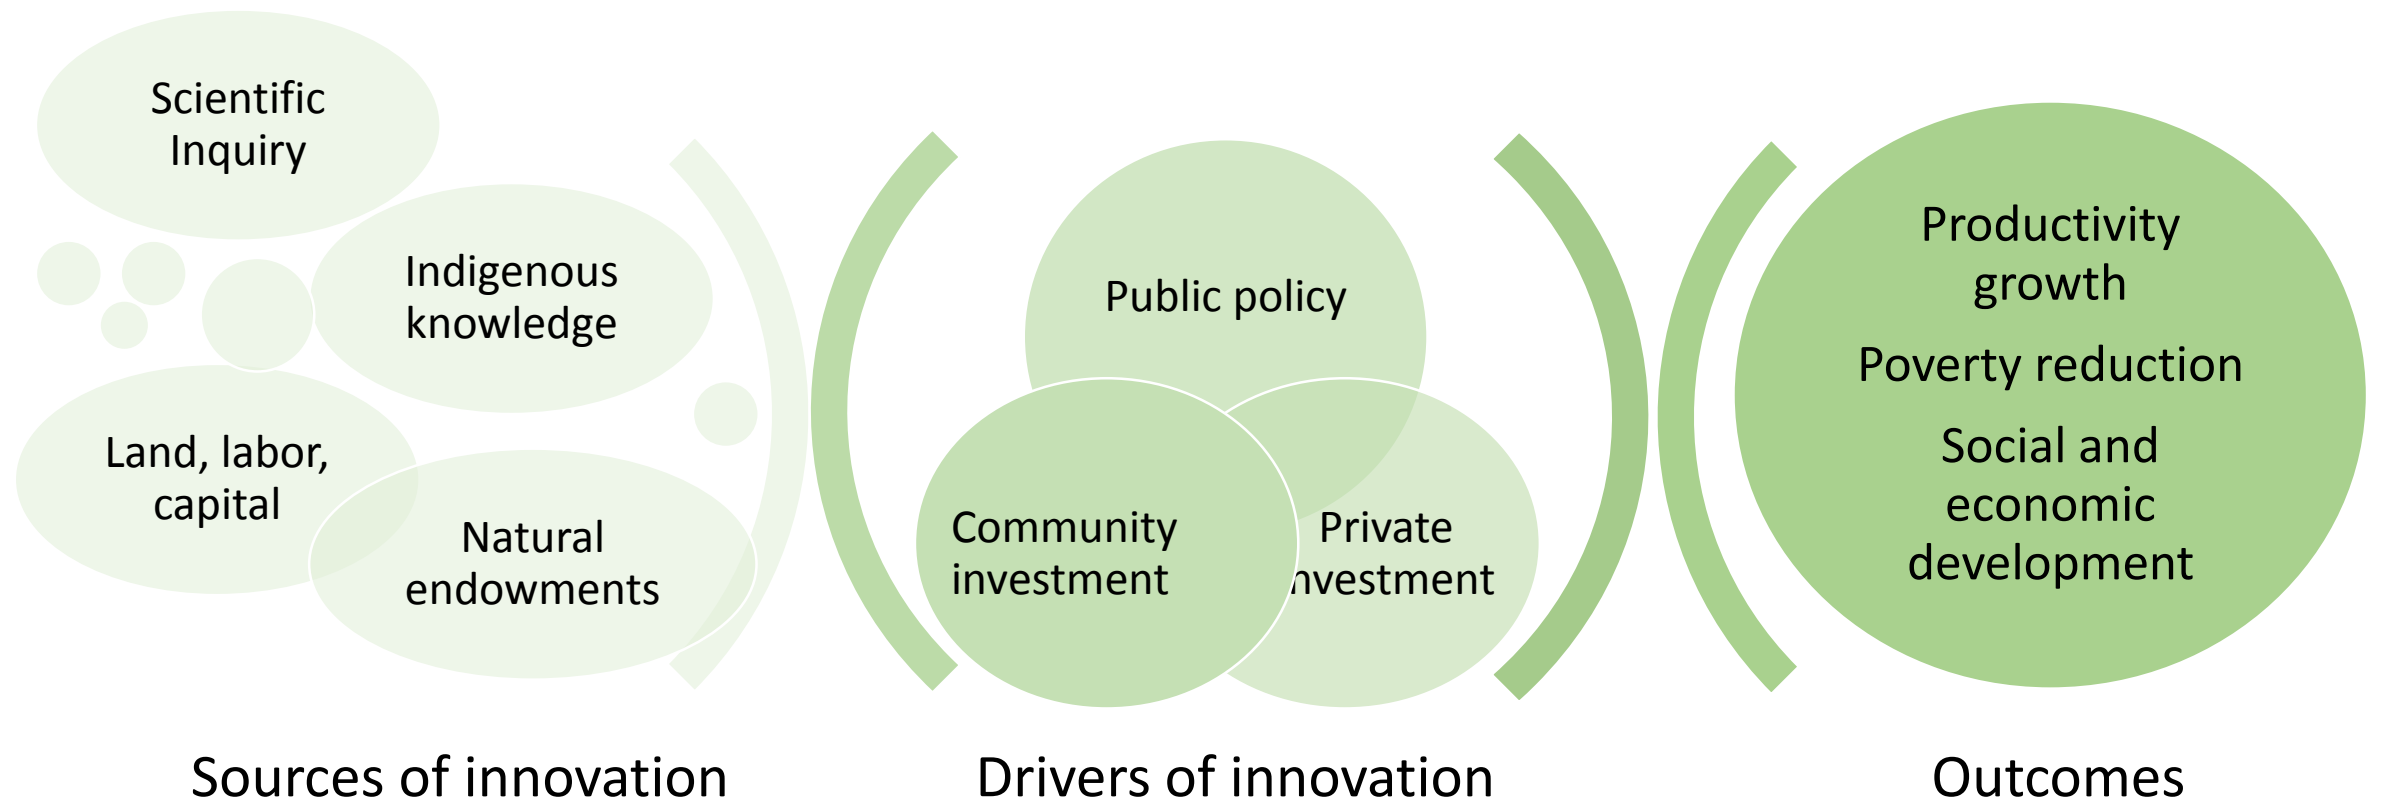

Key action areas for greater food systems *resilience*

The pandemic offers an opportunity to transform food systems

- Good ideas are plentiful
 - Expand the flexibility of social protection programs
 - Increase access to financial services for the poor
 - Digitize financial services and agricultural value chain operations
- Conventional priorities still matter
 - Protect competitive markets and international trade
 - Invest in rural infrastructure, education, extension, and research
- Radical shifts remain challenging
 - Move from “food staple fundamentalism” to nature-positive, gender-transformative, and nutritionally sensitive agriculture

Key action areas for greater food systems *innovation*

The pandemic offers an opportunity to strengthen the position and capacity of developing countries to participate in systems governing the ownership, use, and exchange of intellectual property
